

i want files from a github reppo so how can i get that in my windows space E folder directly

Searched the web >

Two ways to do it — pick whichever suits you:

Option 1 — Git Clone (via Command Prompt / Git Bash)

Make sure Git is installed. Then:

```
bash

git clone https://github.com/USERNAME/REPO-NAME E:\YOUR-FOLDER-NAME
```

Example:

```
bash

git clone https://github.com/akashpawar-0999/PostgreSQL-copy E:\PostgreSQL-copy
```

The basic syntax is `git clone <repository-url> <target-folder-path>`. If the folder doesn't exist, Git creates it automatically. [KodeKloud](#)

Steps:

- 1. Open **Command Prompt** or **Git Bash**
- 2. Run the command above with your repo URL and `E:\FolderName`
- 3. Done — all files land directly in your E drive folder

Option 2 — GitHub Desktop (no commands)

In GitHub Desktop, go to **File → Clone Repository**, click the **URL** tab, paste the repo URL, then click **Choose...** next to "Local Path" and navigate to your E drive folder. [GitHub](#)

Want only a specific subfolder? (not the whole repo)

Use **sparse checkout**:

```
bash

git clone --no-checkout https://github.com/USERNAME/REPO E:\MyFolder
cd E:\MyFolder
git sparse-checkout init
git sparse-checkout set "FolderName"
git checkout
```

Replace `"FolderName"` with the subfolder path inside the repo.

Which repo are you trying to grab — your own or someone else's?
